

## **Process & Decision Documentation**

### **Side Quest Week 1**

#### **What I was trying to do**

This side quest focused on setting up the development environment and confirming that a basic p5.js sketch could run correctly on GitHub Pages.

#### **One small decision or change**

I chose to keep the sketch minimal, using a single blue circle shape, so I could focus on testing the file structure and deployment workflow rather than gameplay features.

#### **GenAI use**

No generative AI tools were used in the creation of this sketch.
